## **DETAILED ACTION**

### ***Restriction Requirement***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-4, 6, 7-12 and 15-17, drawn to a composition comprising a solvent, a hydrophilic polymer, an isocyanate-terminated prepolymer, an alkylester of a carboxylic acid and a pharmacological additive classified in class 424, subclass various.
  - II. Claims 5, 13 and 14, drawn to a composition further containing a urethane, classified in class 424, subclass various.
  - III. Claim 18, drawn to a composition containing an alkylbenzene, a hydrophilic polymer, an isocyanate-terminated prepolymer, an alkylester of a carboxylic acid, and a pharmacological additive classified in class 424, subclass various.
  - IV. Claim 19, drawn to a method of controlling release rate of pharmacological additive, classified in class 436, subclass various.
2. The inventions are distinct, each from the other because:

Inventions I and II are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product (MPEP § 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP § 806.04(h)). In the instant case, the intermediate product is deemed to be useful as a molding or coating composition in and of itself without the presence of additional materials which would react in-situ to produce a mutually exclusive final product species and the inventions are deemed patentably distinct since there is nothing on this

Art Unit: 1711

record to show them to be obvious variants. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

3. Inventions I with each of III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions they have different modes of operation.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

#### ***Election of Species Requirement***

5. Claims 1–18 are generic to a plurality of disclosed patentably distinct species comprising the various materials embraced by the hydrophilic polymer and the various materials embraced by the pharmacological additive. The election of an ultimate species defining the hydrophilic polymer and the pharmacological additive is requested. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the

Art Unit: 1711

examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
